

INSTRUMENT MOUNTING NUTS

E-Mail: sales@asapspares.com.au

Mount aircraft instruments to the front face of the panel. Cage is easily compressed with finger-pressure to allow insertion of legs into clearance holes. When fully inserted from the back of the panel and pressure is released, legs spring apart, retaining nut in place.

Non-magnetic, conforms to MIL-N-3336. **For use with Brass 6-32 screws.**
